

Import Custom Vocab Lists in the CL-150 Platform

Using an online flashcard system but want your learning time tracked? Keeping a list of new words in your Notes app that you never revisit? Still making paper flashcards (gasp!) and want something way more efficient?

Import your vocab lists to make custom vocab lessons in the CL-150 Platform!

<https://vimeo.com/617230292>

Using an Excel template, it takes as little as 5 minutes to import vocab lists from other apps or create a vocab lesson from scratch.

The authoring tool then lets you punch up your vocab lessons with audio, images, and custom cultural or grammatical notes.

The result is no simple flashcard lesson. Your custom vocab lesson automatically includes eight activities that cover listening, speaking, reading, and typing. You can also take a scored assessment at the end to measure your progress.

You also get all the other perks of CL-150 lessons:

- Once you learn the words and phrases in your custom lesson, they are added to [your Learned Vocab](#) where you can periodically review them to keep them fresh in your memory.
- You can select your custom lesson to use in the [Practice activities and quizzes](#) if you'd like to focus on a specific modality.
- If you have a weekly or monthly learning requirement, time spent learning your custom lesson is counted towards that goal and reported to your program manager

Ready to add your first custom vocab lesson? Watch [this video](#) to get started.
